# **Building the future of equitable healthcare**

Project Title	Building the future of equitable healthcare
Project Silmmary	In the post-COVID push for more virtual care, help ensure that telehealth services for Veterans are equitable and inclusive
Country	United States

### **Project Description**

Since the onset of COVID-19, hospitals have increasingly looked to virtual care as a way to continue to see patients safely, while maintaining social distance. As more people turn to virtual care, work is needed to ensure that telehealth and other remote care services are equitable and inclusive.

The San Francisco VA Health Care System was an early pioneer of telehealth in the VA and is currently a national leader in providing remote care services. SFVAHCS' Office of Strategic Planning is looking for creative, compassionate students to evaluate how our remote care programs are meeting the needs of underserved groups. Students will perform research to identify best practices, engage with clinical and administrative leaders, and develop recommendations.
